Our Accreditations & Certifications

We hold all the certifications that matter:

- MCS Certified – The Microgeneration Certification Scheme is the industry standard for quality. MCS certification is required for access to the Smart Export Guarantee which pays you for electricity you export to the grid.
- NAPIT Registered – Demonstrating competence in electrical installation work.
- TrustMark Approved – Part of the Government endorsed quality scheme for tradespeople.
- CHAS Certified Contractor – Demonstrating compliance with industry leading standards for health and safety, and risk management.

Every installation comes with a 5 year workmanship warranty backed by insurance, plus a 30 year manufacturer warranty on panels and 10 year warranty on inverters and batteries.

CERTIFIED

About us

Why use Simple Solar?

- A local company with local installers
- Fully qualified engineers
- 15 years experience in renewables
- 5-year workmanship warranty (insurance backed)
- SUNPOWER Premier Partner
- Tesla approved
- Fully MCS Registered
- Consumer code protection
- Industry leading products and warranties
- Honest advice with no pushy sales
- End-to-end, full turnkey project delivery
- Dedicated aftercare and ongoing support

SUNPOWER

Premier Partner

POWERWALL

CERTIFIED INSTALLER

System Summary

What is included in your price?

We have quoted you for {{panelquantity}} SUNPOWER panels, creating a {{systemsize}} kWp system on your roof. The panels will generate {{generation}} kWh per year, giving you a saving of £{{annualsaving}} in year one, and a lifetime saving off £{{totalsaving}}.

We will apply to the National Grid for approval before we commence and we will inform them once your system is completed.

We will provide you with a full MCS compliant pack. As standard we aim to keep this digital but we will be happy to send you a paper copy if you'd prefer.

The total cost for your system, based on the above is **£{{price}}**

Based on

- Annual usage of: {{annualusage}} kWh per year
- Cost of electricity: {{priceperkw}} pence per kW
- Smart Export Guatantee rate: {{segrate}} pence per kW

The Performance of the Solar PV system is impossible to predict with certainty due to the variability in the amount of solar radiation (sunlight) from location to location and from year to year. This estimate is based on the government's standard procedure for energy rating of buildings (SAP) and is given as guidance only. It should not be considered as a guarantee of performance.

Solar Panels	System Size
{{panelquantity}} SUNPOWER Panels	{{systemsize}} kWp
Inverter	Annual Generation
{{inverter}}	{{generation}} kWh
Battery	Battery Size
{{battery}}	{{batterysize}}kWh
Year 1 Savings	Return On Investment
£{{annualsavings}}	{{roi}}%

Our Referral Scheme

Nothing beats a personal recommendation.

If you've had a great experience with us and pass our name on, we'd much rather thank you than pay for advertising.

When someone you refer goes ahead with an installation, you'll receive:

• **£350 – for every referral**

No limits.

Every referral is genuinely appreciated and means a great deal to us.

Electricity trends since 2000

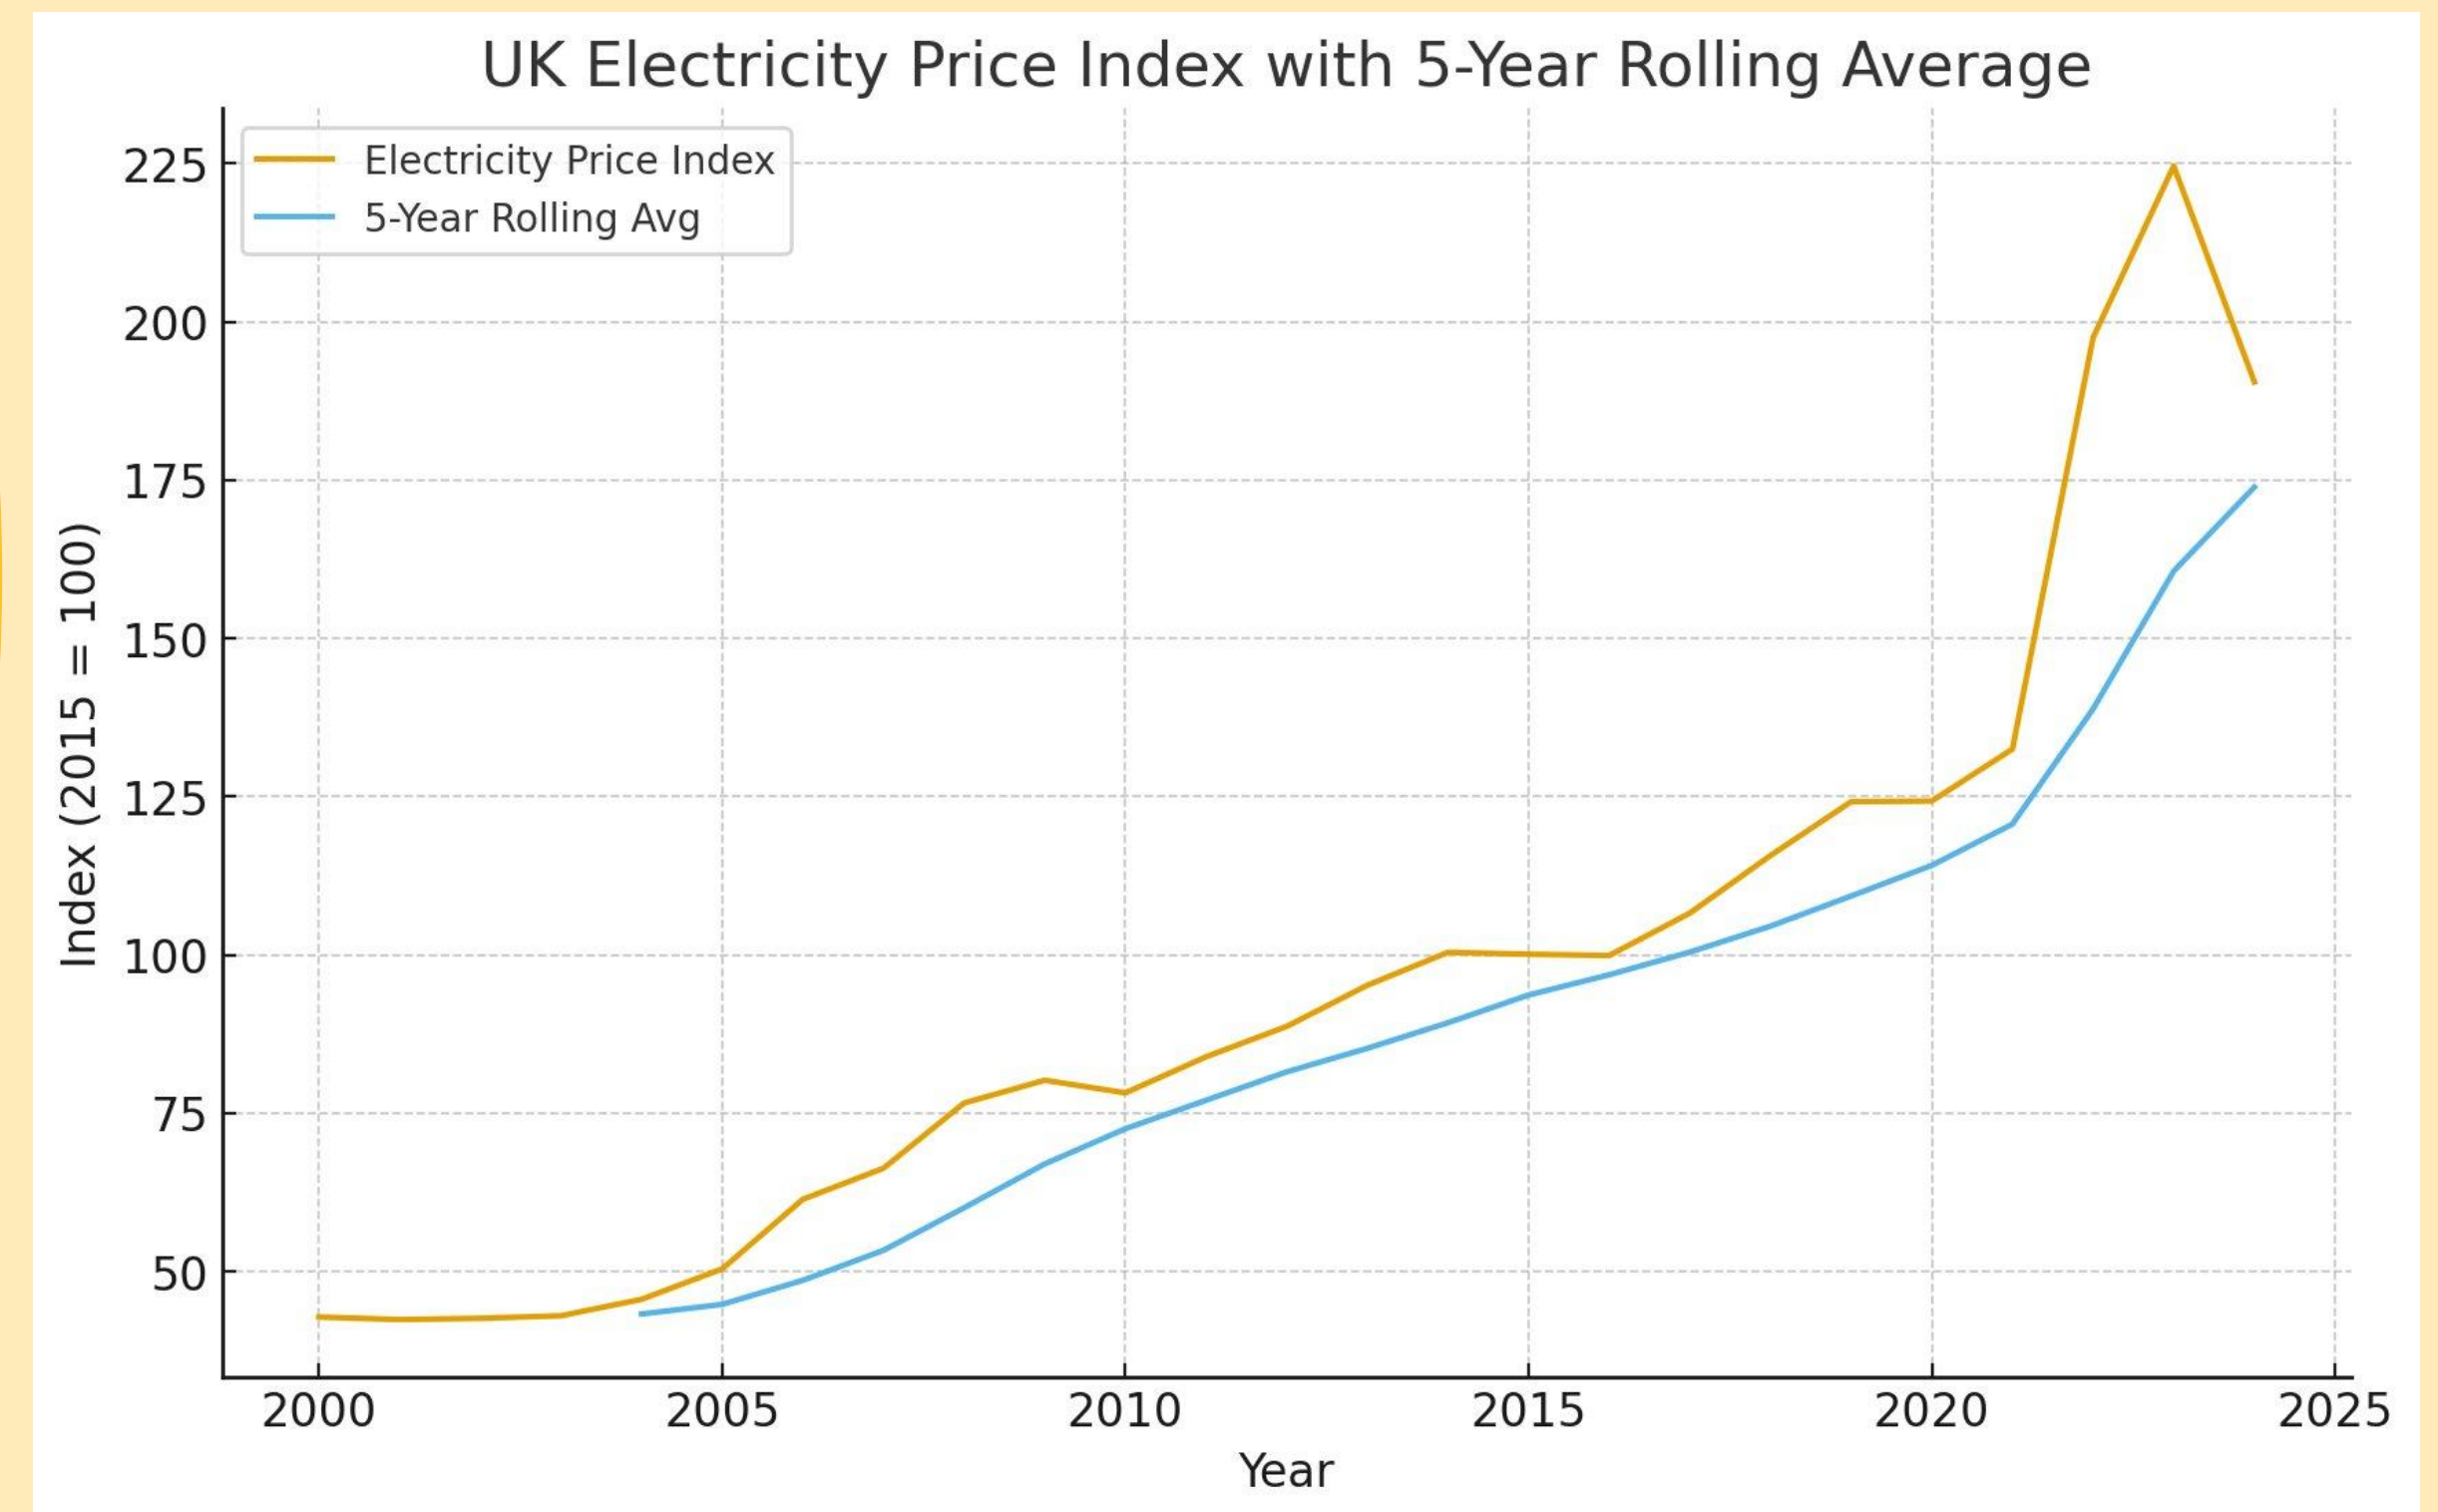

Since 2000, household electricity costs have followed a clear pattern:

- Long-term upward trend in energy prices
- Sharp spikes during supply and policy shocks
- Prices rarely return to previous lows after increases
- Greater volatility year-to-year, making bills less predictable

Historically, households without solar remain fully exposed to these trends, while homes with solar reduce their reliance on grid electricity over time.

simple solar
Clear • Easy • Affordable

Electricity costs are up 7.92% per year since the year 2000 on average

Source ONS electricity price index

If nothing changes...

What happens if you don't install solar?

If you choose not to install solar, your energy bills will continue to be:

- Fully exposed to rising electricity prices
- Dependent on the grid for all daytime and evening usage
- Unprotected from future price increases and policy changes
- Paid every month, indefinitely, with no long-term reduction

The table below shows a realistic projection of what your electricity bills may look like over time if nothing changes.

Solar doesn't remove energy bills entirely – but it reduces your reliance on the grid, helping you keep more control over your energy costs rather than being at the mercy of future price rises.

**Based on a 7% yearly increase*

Total Electricity spend over 30 years
£{{73}}

Monthly Electricity bill in 30 years
£{{74}}

Price per kW in 30 years
£{{72}}

Year	Pence per kW*	Monthly Bill	Annual Bill
1	{{55}}	{{2}}	{{3}}
2	{{56}}	{{5}}	{{6}}
3	{{57}}	{{8}}	{{9}}
4	{{58}}	{{11}}	{{12}}
5	{{59}}	{{14}}	{{15}}
10	{{64}}	{{29}}	{{30}}
15	{{69}}	{{44}}	{{45}}
20	{{70}}	{{47}}	{{48}}
30	{{72}}	{{53}}	{{54}}

30 Year Savings Plan

What happens if you install solar?

This table shows how your solar system is expected to reduce your electricity costs while also generating income through the Smart Export Guarantee (SEG).

By using more of the energy you generate on site, you buy less electricity from the grid. Any surplus energy that isn't used is exported and paid for by your energy supplier under the SEG scheme.

The figures shown combine:

- Estimated savings from reduced electricity purchases
- Estimated SEG income from exported energy

Actual savings and income will vary depending on usage patterns, export rates, and future energy prices, but the projections provide a realistic view of how the system can deliver ongoing financial benefits over time.

**Based on a monthly representative average - seasonal variations will apply*

Year	Monthly Savings*	Yearly Savings	Accumulated Income
1	{{101}}	{{102}}	{{103}}
2	{{104}}	{{105}}	{{106}}
3	{{107}}	{{108}}	{{109}}
4	{{110}}	{{111}}	{{112}}
5	{{113}}	{{114}}	{{115}}
10	{{128}}	{{129}}	{{130}}
15	{{143}}	{{144}}	{{145}}
20	{{146}}	{{147}}	{{148}}
30	{{152}}	{{153}}	{{154}}

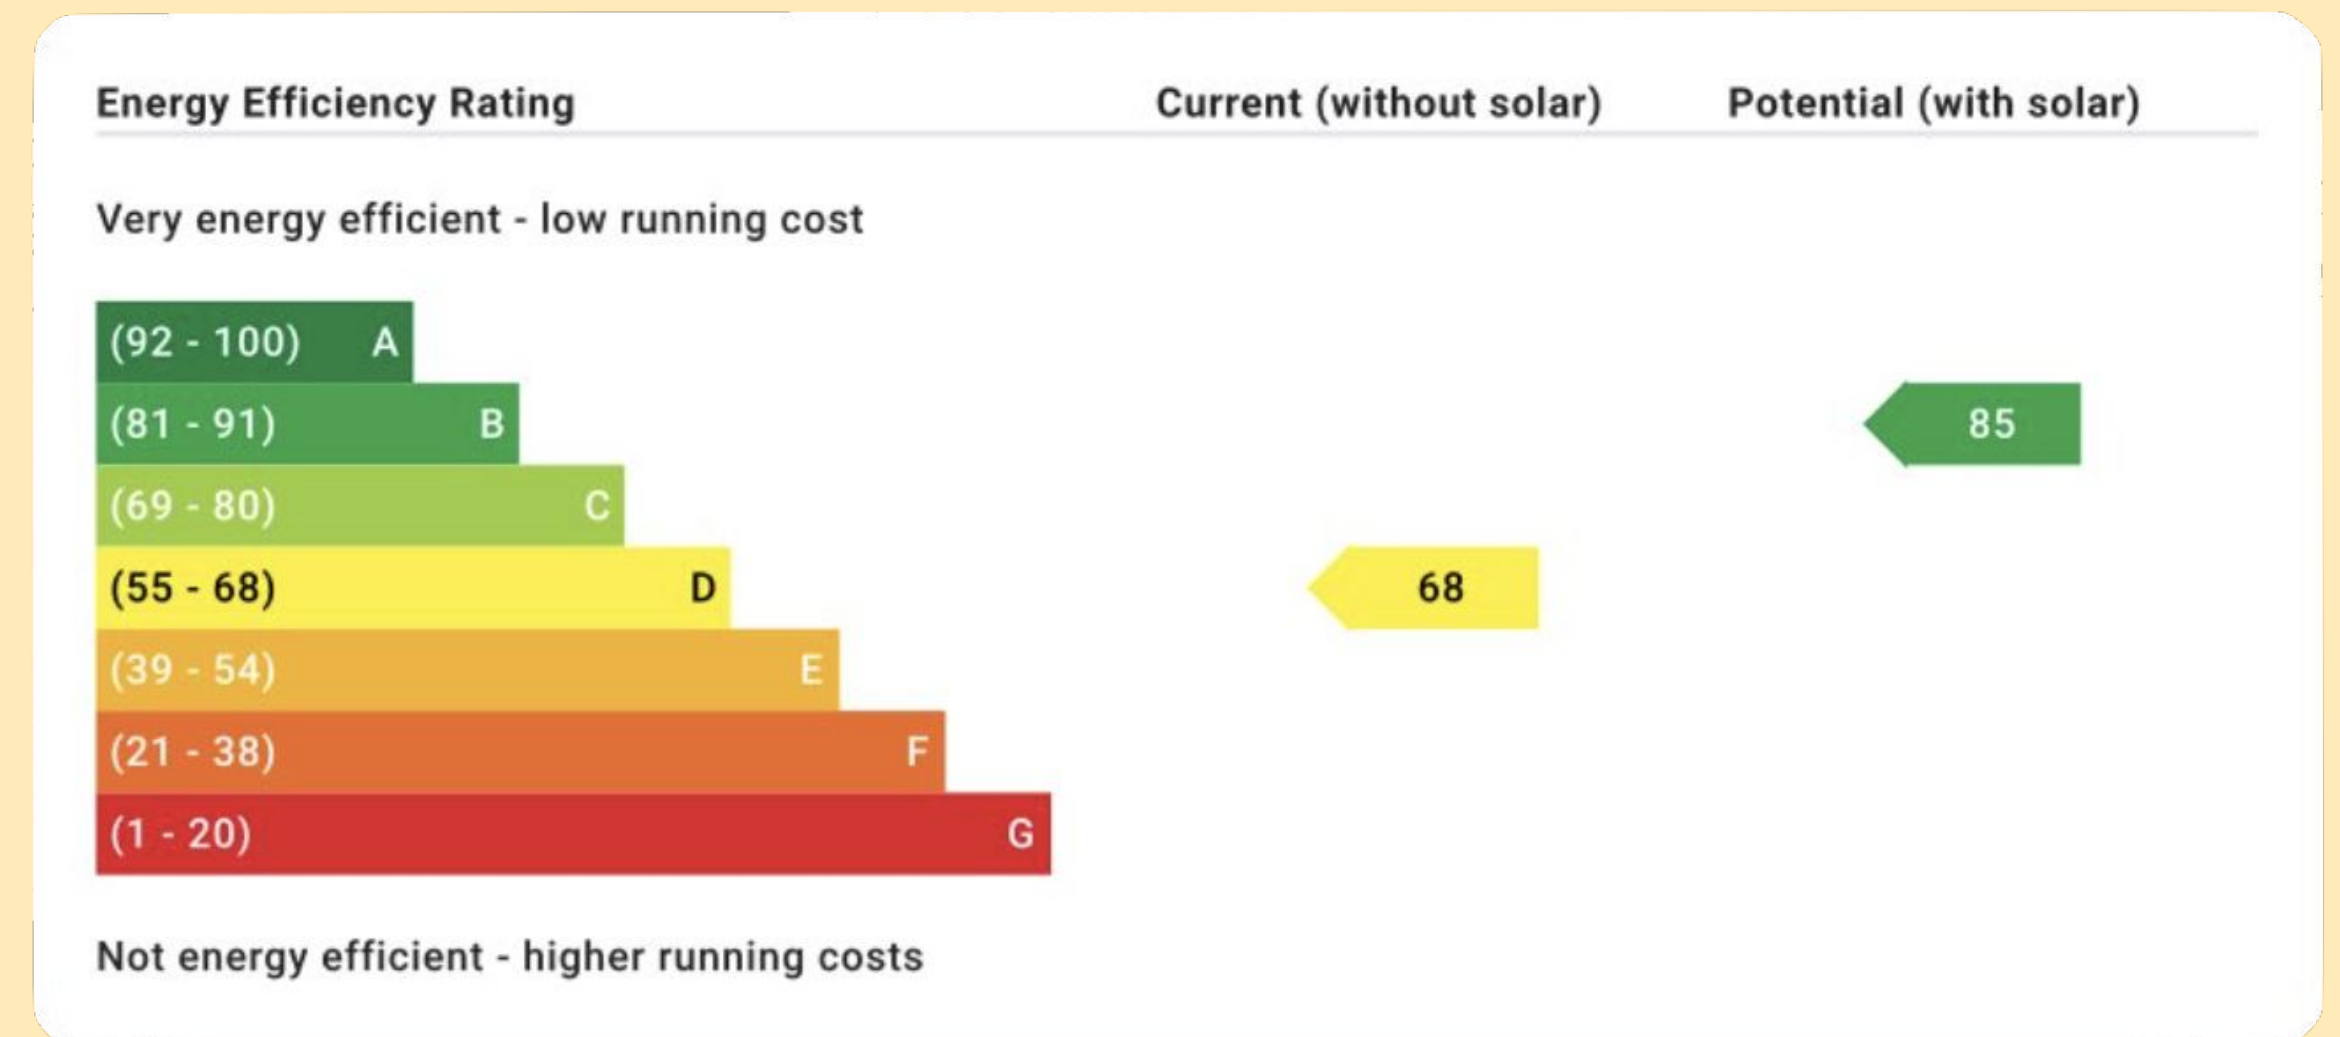

Increase your property's EPC

How solar improves your home's value and efficiency

Installing solar improves how efficiently your home uses energy and how it's viewed in the market:

- Lower ongoing energy costs, making the home cheaper to run
- Improved EPC rating, increasing overall energy efficiency
- More attractive to future buyers, especially energy-conscious households
- Greater protection against rising energy prices
- Modern, future-ready home improvements that add long-term appeal

Your Solar Panels

We only ever install **SUNPOWER Performance Panels**, selected for their proven durability, reliability and long-term performance.

They're backed by an industry-leading **30-year** warranty, covering:

- Product defects in workmanship and materials
- Repair or full replacement of defective panels
- Removal, shipping and re-installation included

This provides long-term protection and peace of mind for your investment.

Your Battery Storage

We've recommended the **Tesla Powerwall 3 Battery System**, selected for its proven reliability, intelligent energy management, and long-term performance.

It's designed to store excess solar energy and use it at the most valuable times, reducing reliance on the grid and improving overall system efficiency.

The Powerwall 3 is backed by a robust manufacturer warranty, providing long-term protection and confidence in your investment.

Your Battery Storage

We've recommended the **Fox ESS Battery system**, selected for their reliability, flexibility, and proven performance in residential solar installations.

Fox battery systems store excess solar energy for use when it's needed most, helping to reduce grid reliance, increase self-consumption, and improve overall system efficiency.

They're supported by a comprehensive manufacturer warranty, providing long-term confidence in your investment.

***Modular battery
design for
scalable capacity***

***Easy-to-use

Your Battery Storage

We've recommended the **Duracell Energy system**, selected for their reliability, flexibility, and proven performance in residential solar installations.

Duracell battery systems store excess solar energy for use when it's needed most, helping to reduce grid reliance, increase self-consumption, and improve overall system efficiency.

They're supported by a comprehensive manufacturer warranty, providing long-term confidence in your investment. Their office is UK based and they have a strong reputation for their aftercare and ongoing support.
